

1. Frame file plotter. Open a frame file, read it's contents, and produce a PostScript plot.

```

#define SAMPLERATE 16000
#include <stdio.h>
main(int argc, char *argv[])
{
    FILE *inf;
    int nframes, framesize;
    char *s, the_line[128];
    float one_value;
    int targetval;
    int i, j;
    double litvalue, samples, samples_per_point;
    argc--;
    argv++;
    if (!argc) {
        fprintf(stderr, "No arguments! I need a frame file.\n");
        exit(1);
    }
    if ((inf = fopen(*argv, "r")) == NULL) {
        fprintf(stderr, "couldn't open file \"%s\"\n", *argv);
        exit(1);
    }
    fgets(the_line, sizeof(the_line), inf);
    if (strncmp(the_line, "framesize=", 11) != 0) {
        fprintf(stderr, "Frame file has bad format: missing framesize\n");
        exit(1);
    }
    s = the_line + 11;
    framesize = atoi(s);
    fgets(the_line, sizeof(the_line), inf);
    if (strncmp(the_line, "nframes=", 9) != 0) {
        fprintf(stderr, "Frame file has bad format: missing nframes\n");
        exit(1);
    }
    s = the_line + 9;
    nframes = atoi(s); /* Print out the PostScript header */
    fprintf(outf, "%%\n");
    fprintf(outf, "/maxval 1.0 def\n");
    fprintf(outf, "8.0 72 mul 0.75 72 mul translate 90 rotate\n");
    fprintf(outf, "/frames %d def\n", nframes);
    fprintf(outf, "/bh 7.75 72 mul %d div def\n", framesize);
    fprintf(outf, "/bw 10 72 mul frames div def\n");
    fprintf(outf, "/x 0 def /y 0 def\n");
    fprintf(outf, "/d { maxval mul neg add setgray\n");
    fprintf(outf, "x y moveto bh rlineto bw 0 rlineto bh neg rlineto\n");
    fprintf(outf, "closepath fill /y y bh add def bind def\n");
    fprintf(outf, "/r { y 0 def /x x bw add def } def\n");
    for (i = 0; i < nframes; i++) {
        fscanf(inf, "%d\n", &targetval);
        for (j = 0; j < framesize; j++) {
            fscanf(inf, "%g\n", &one_value);

```

```

    printf("%.3g\nd\n", one_value);
}
printf("r\n");
} /* I want to draw lines on the chart at intervals which are some factor of 10, which will indicate
   either seconds or milliseconds. First, determine the number of samples per PostScript point on
   the chart. */
